Replaced revision:1 (Dated 21/05/2022)

### **Safety Data Sheet**

According to Annex II to REACH - Regulation 2020/878 and to Annex II to UK REACH

### SECTION 1. Identification of the substance/mixture and of the company/undertaking

### 1.1. Product identifier

Code: 3006912010320
Product name FS01 YELLOW

### 1.2. Relevant identified uses of the substance or mixture and uses advised against

Intended use Paint for road markings, based on acrylic resin.

Identified UsesIndustrialProfessionalConsumerPainting for horizontal road signs-ERC: 8d.PROC: 10, 11, 19, 5, 8a.

PC: 9a. LCS: PW.

### **Uses Advised Against**

Any use other than those identified on this sheet.

### 1.3. Details of the supplier of the safety data sheet

Name VERNISOL SPA

Full address VIA SANTE GIUSEPPE BERTINI, 1
District and Country 26845 CODOGNO

ITALIA

Tel. 0377/621250

Fax vernisolinfo@ppg.com

responsible for the Safety Data Sheet vernisolinfo@ppg.com

1.4. Emergency telephone number

e-mail address of the competent person

For urgent inquiries refer to Poisons Information Center - Icelandic University Hospital

Fossvogur, Reykjavík, Iceland

Phone: +345 543 22 22 - active 24/24 hours

### 2.1. Classification of the substance or mixture

The product is classified as hazardous pursuant to the provisions set forth in (EC) Regulation 1272/2008 (CLP) (and subsequent amendments and supplements). The product thus requires a safety datasheet that complies with the provisions of (EU) Regulation 2020/878. Any additional information concerning the risks for health and/or the environment are given in sections 11 and 12 of this sheet.

Hazard classification and indication:

Flammable liquid, category 3

Skin sensitization, category 1A

Specific target organ toxicity - single exposure, category 3

H226

H317

May cause an allergic skin reaction.

May cause drowsiness or dizziness.

Category 3

### 2.2. Label elements

Hazard labelling pursuant to EC Regulation 1272/2008 (CLP) and subsequent amendments and supplements.

### Hazard pictograms:

Signal words: Warning

### 3006912010320 - FS01 YELLOW

Revision nr.2 Dated 21/02/2023 Printed on 21/02/2023 Page n. 2 / 23

Replaced revision:1 (Dated 21/05/2022)

### SECTION 2. Hazards identification .../>>

Hazard statements:

H226 Flammable liquid and vapour.
H317 May cause an allergic skin reaction.
H336 May cause drowsiness or dizziness.

**EUH066** Repeated exposure may cause skin dryness or cracking.

Precautionary statements:

P210 Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking.

**P280** Wear protective gloves/ protective clothing / eye protection / face protection.

P370+P378 In case of fire: extinguish with water spray, foam, chemical powder, carbon dioxide (CO2).

P261 Avoid breathing dust / fume / gas / mist / vapours / spray.
P312 If you feel unwell contact a POISON CENTER or a doctor.
P403+P233 Store in a well-ventilated place. Keep container tightly closed.

Contains: FATTY ACIDS, TALLOIL, COMPOSED WITH OLEYLAMINE

N-BUTYL ACETATE
METHYL ETHYL KETONE
METHYL METHACRYLATE
N-BUTYL METHACRYLATE

FATTY ACIDS, C-18, UNSATURATED TRIMERS COMPOSED WITH 9-OCTADECEN-1-AMINE, (Z) -

Product not intended for uses provided for by Directive 2004/42/EC.

### 2.3. Other hazards

On the basis of available data, the product does not contain any PBT or vPvB in percentage ≥ than 0,1%.

The product does not contain substances with endocrine disrupting properties in concentration ≥ 0.1%.

### **SECTION 3. Composition/information on ingredients**

### 3.2. Mixtures

Contains:

The full wording of hazard (H) phrases is given in section 16 of the sheet.

TITANIUM DIOXIDE

Substance with a workplace exposure limit.

### SECTION 4. First aid measures

### 4.1. Description of first aid measures

Rescuers, to avoid being exposed, must wear the PPE provided and described in section 8 before intervening.

Immediately remove contaminated, soaked clothing and put it in a safe place.

The rescuer must equip himself with individual protection.

Inhalation: Keep at rest, ventilate with clean air; if symptoms persist or if there are any doubts, consult a doctor.

Eyes: Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. Remove contact lenses. Seek immediate medical help.

Skin: Wash off immediately with soap and plenty of water.

If symptoms persist or if there are any doubts, consult a doctor.

Ingestion: Call a doctor immediately; do not induce vomiting without prior medical instructions.

### 4.2. Most important symptoms and effects, both acute and delayed

Cough, nausea, vomiting, headache, unconsciousness, labored breathing, dizziness, narcosis.

Exceptional danger: Pulmonary edema, consequent on the S.N.C.

### 4.3. Indication of any immediate medical attention and special treatment needed

Notes to physician: treat symptomatically

Revision nr.2 Dated 21/02/2023 Printed on 21/02/2023 Page n. 4 / 23 Replaced revision:1 (Dated 21/05/2022)

### **SECTION 5. Firefighting measures**

### 5.1. Extinguishing media

Suitable extinguishing media: Foam, dry chemical, carbon dioxide (CO2), water spray.

Extinguishing media which must not be used for safety reasons: do not use a jet of water as it may scatter or spread fire.

### 5.2. Special hazards arising from the substance or mixture

Harmful gases produced by the flame if incomplete combustion occurs, could consist of: Carbon monoxide (CO), carbon dioxide (CO2). Combustion gases from organic materials are generally classified as harmful to the respiratory tract.

The vapors are heavier than air and can move away from the ignition source even covering considerable distances with the consequent risk of a backfire. They can form explosive mixtures with air.

#### 5.3. Advice for firefighters

Fire protection devices must include self-contained breathing protective equipment and complete extinguishing equipment (approved by NIOSH or EN133).

Fire fighting precautions:

Cool the containers / tanks with water spray.

Dike and collect the water used to fight the fire.

Discharge of contaminated water can cause damage to the environment.

Keep people away from fire and upwind.

### **SECTION 6. Accidental release measures**

### 6.1. Personal precautions, protective equipment and emergency procedures

Avoid contact with skin and eyes.

Do not breathe vapors or mists.

Keep people away from loss, upwind.

Ensure adequate ventilation especially in closed areas.

Keep away from heat sources and other causes of fire.

For first aid workers: personal protection see section 8.

### 6.2. Environmental precautions

Avoid further dripping or leaking.

Do not discharge the product into the aquatic environment without pretreatment (biological treatment plant).

### 6.3. Methods and material for containment and cleaning up

Stop spillage of the substance where possible without risk.

Dike any spilled material as much as possible.

Methods for cleaning up: dry with inert absorbent material.

Store in suitable, closed containers for disposal.

If large quantities of liquid are spilled, clean up immediately with a shovel or vacuum cleaner.

Eliminate in compliance with current legislation.

Take care to avoid static electricity discharges (which could cause ignition of organic vapors).

### 6.4. Reference to other sections

Any information regarding personal protection and disposal is given in sections 8 and 13.

### **SECTION 7. Handling and storage**

### 7.1. Precautions for safe handling

Keep away from heat, sparks and open flames, do not smoke or use matches or lighters.

Vapors can ignite with explosion, therefore accumulation must be avoided by keeping doors and windows open and ensuring cross ventilation. Without adequate ventilation, the vapors can accumulate on the ground and ignite even at a distance, if ignited, with the risk of backfire.

Avoid the accumulation of electrostatic charges.

Connect to an earth outlet in the case of large packagings during the transfer operations and wear antistatic shoes. The strong agitation and the vigorous flow of the liquid in the pipes and equipment can cause the formation and accumulation of electrostatic charges. To avoid the risk of fire and explosion, never use compressed air when handling.

Open the containers carefully, because they can be under pressure.

Do not eat, drink or smoke during use.

Revision nr.2 Dated 21/02/2023 Printed on 21/02/2023 Page n. 5 / 23

Replaced revision:1 (Dated 21/05/2022)

### SECTION 7. Handling and storage .../>>

Avoid dispersal of the product in the environment.

### 7.2. Conditions for safe storage, including any incompatibilities

FOR OUTDOOR USE

Frequency of use: up to 300 days / year. Environment of use: outdoor use.

Operating temperature: Ambient temperature (+ 15 ° C / + 25 ° C).

Other operating conditions that influence worker exposure: implement an adequate workplace hygiene standard. Take into account

Occupational Exposure Limits including biological exposure indicators.

Organizational measures to avoid / limit spills, dispersion and exposure: consider technical progress and process updating (including automation) for the elimination of emissions.

Make sure operators are trained to minimize exposure.

Make sure that the ventilation system is regularly subjected to maintenance and operational verification.

Ensure the minimization of the manual phases.

Eliminate spills immediately.

Maintain a good level of general cleanliness.

Conditions and measures related to personal protection, hygiene and health evaluation: wear the PPE indicated in section 8 of the safety data sheet

### 7.3. Specific end use(s)

Reference Section 1.2.

### **SECTION 8. Exposure controls/personal protection**

### 8.1. Control parameters

### 3006912010320 - FS01 YELLOW

Revision nr.2 Dated 21/02/2023 Printed on 21/02/2023 Page n. 11 / 23

Replaced revision:1 (Dated 21/05/2022)

### SECTION 8. Exposure controls/personal protection ..../>>

### 8.2. Exposure controls

The use of appropriate technical measures should always take priority over personal protective equipment (PPE). Personal protective equipment must bear the CE marking which certifies their compliance with current standards. Provide emergency shower with visocular tray. Manage personal protective equipment in such a way as to ensure maximum protection (e.g. reduction of replacement times). Based on the activities carried out, follow the technical measures described below.

Distribution and storage of the product with occasional controlled exposure: no specific measures.

Duration of the daily exposure: up to 15 minutes (sampling).

Transfer of the product and preparation including loading of the machines: use drum transfer pumps or pour carefully from the container.

Wear the PPE shown below.

Duration of daily exposure: up to 1 hour.

Automated or manual spray application: Wear the PPE shown below.

Duration of the daily exhibition: up to 4 hours.

Automated or manual application by brush / roller: Wear the PPE shown below.

Duration of daily exposure: up to 8 hours.

Film formation. Air drying: Make sure the operation is performed externally.

Completely empty the equipment before entering or performing maintenance.

Wear the PPE shown below.

Duration of daily exposure: up to 1 hour.

Collection and storage of waste pending delivery: store washing solutions and product residues in closed containers pending disposal. When

handling waste, wear the PPE shown below. Duration of daily exposure: up to 1 hour.

### HAND PROTECTION

Protect your hands with category III work gloves (ref. Standard EN 374). Suitable gloves (protection factor 6, breakthrough time> 480

Material (thickness, mm): polyvinyl alcohol-PVA (0.3 mm), PE / EVOH laminate (0.06 mm) or equivalent.

#### PROTECTION OF THE SKIN

Wear category II professional long-sleeved overalls and safety footwear (ref. Directive 89/686 / EEC and standard EN ISO 20344). Wash with soap and water after removing protective clothing. Evaluate the opportunity to provide antistatic clothing if the work environment presents an explosion hazard.

### **FYF PROTECTION**

Wear airtight protective glasses (ref. Standard EN 166).

### RESPIRATORY PROTECTION

If the threshold value (e.g. TLV-TWA) of the substance or one or more substances present in the product is exceeded, it is advisable to wear a mask with type A filter combined with a type P2 filter or higher whose limit of use will be defined by the manufacturer (ref. Standard EN 14387). If gases or vapors of a different nature were present, combined filters should be provided. The use of respiratory protection means is necessary in case of insufficient technical measures adopted to limit the worker exposure to the threshold values taken into consideration. The protection offered by the masks is however limited. In the event that the substance is odorless or its olfactory threshold is higher than the relative TLV-TWA and in the event of an emergency, wear an open circuit compressed air breathing apparatus (ref. Standard EN 137) or an air intake respirator. external (ref. Standard EN 138).

For the correct choice of the respiratory protection device, refer to EN 529.

### **ENVIRONMENTAL EXPOSURE CONTROL**

Containment and disposal of liquid waste produced on the site. Treat waste water to ensure a reduction efficiency greater than 93.3%. Do not distribute the sludge produced by the wastewater treatment plants on the ground.

Waste treatment and disposal must comply with local / national legislation.

The collection and / or recycling of waste must be carried out only by specialized companies authorized in accordance with local / national legislation.

### **ENVIRONMENTAL EXPOSURE CONTROLS**

The emissions generated by manufacturing processes, including those generated by ventilation equipment, should be checked to ensure compliance with environmental standards.

### **SECTION 9. Physical and chemical properties**

### 9.1. Information on basic physical and chemical properties

Properties	value	information
Appearance	liquid	
Colour	yellow	
Odour	fruity aromatic	
Melting point / freezing point	< -90 °C	Substance:N-BUTYL ACETATE
Initial boiling point	124 °C	Substance:N-BUTYL ACETATE

Particle characteristics Not applicable

#### 9.2. Other information

Based on the information available to date, the percentage of titanium dioxide particles with an aerodynamic diameter ≤10 microns contained in the product is less than 1% (determined according to the EN 15051-2 standard).

### 9.2.1. Information with regard to physical hazard classes

Information not available

### 9.2.2. Other safety characteristics

Substance: N-BUTYL ACETATE Evaporation rate 1 (BUAC = 1); 12 (Etere)

VOC (Directive 2010/75/EU) 27,31 % 17.29 % VOC (volatile carbon)

Explosive properties Not classified as explosive Oxidising properties Not classified as an oxidant high (> = 10 kPa)

### SECTION 10. Stability and reactivity

### 10.1. Reactivity

There are no particular risks of reaction with other substances in normal conditions of use.

### 1-METHOXY-2-PROPANOL

Dissolves various plastic materials. Stable in normal conditions of use and storage.

Absorbs and disolves in water and in organic solvents. With air it may slowly form explosive peroxides.

### METHYL ETHYL KETONE

Reacts with: light metals, strong oxidants. Attacks various types of plastic materials. Decomposes under the effect of heat.

### N-BUTYL ACETATE

Decomposes on contact with: water.

### 1-METHYL-2-METHOXYETHYL ACETATE

Stable in normal conditions of use and storage.

With air it can slowly give peroxides which explode when the temperature rises.

### 10.2. Chemical stability

The product is stable in normal conditions of use and storage.

### 10.3. Possibility of hazardous reactions

The vapours may also form explosive mixtures with the air.

### XYLENE (MIXTURE OF ISOMERS)

Stable in normal conditions of use and storage. Reacts violently with: strong oxidants, strong acids, nitric acid, perchlorates. May form explosive mixtures with: air.

### METHYL METHACRYLATE

May polymerise on contact with: ammonia,organic peroxides,persulphates.Risk of explosion on contact with: dibenzoyl peroxide,diterbutyl peroxide,propionaldehyde.May react dangerously with: strong oxidising agents.Forms explosive mixtures with: air.

### 3006912010320 - FS01 YELLOW

Revision nr.2 Dated 21/02/2023 Printed on 21/02/2023 Page n. 13 / 23

Replaced revision:1 (Dated 21/05/2022)

### SECTION 10. Stability and reactivity .../>>

#### **ETHYLBENZENE**

Reacts violently with: strong oxidants. Attacks various types of plastic materials. May form explosive mixtures with: air.

1-METHOXY-2-PROPANOL

May react dangerously with: strong oxidising agents, strong acids.

#### METHYL ETHYL KETONE

May form peroxides with: air,light,strong oxidising agents.Risk of explosion on contact with: hydrogen peroxide,nitric acid,sulphuric acid.May react dangerously with: oxidising agents,trichloromethane,alkalis.Forms explosive mixtures with: air.

#### N-BUTYL ACETATE

Risk of explosion on contact with: strong oxidising agents. May react dangerously with: alkaline hydroxides, potassium tert-butoxide. Forms explosive mixtures with: air.

#### 1-METHYL-2-METHOXYETHYL ACETATE

May react violently with: oxidising substances, strong acids, alkaline metals.

#### 10.4. Conditions to avoid

Avoid overheating. Avoid bunching of electrostatic charges. Avoid all sources of ignition.

#### METHYL METHACRYLATE

Avoid exposure to: heat,UV rays.Avoid contact with: oxidising substances,reducing substances,acids,bases.

### 1-METHOXY-2-PROPANOL

Avoid exposure to: air.

METHYL ETHYL KETONE

Avoid exposure to: sources of heat.

N-BUTYL ACETATE

Avoid exposure to: moisture, sources of heat, naked flames.

#### 1-METHYL-2-METHOXYETHYL ACETATE

Avoid overheating. Avoid the accumulation of electrostatic charges. Avoid any source of ignition.

### 10.5. Incompatible materials

#### 1-METHOXY-2-PROPANOL

Incompatible with: oxidising substances, strong acids, alkaline metals.

#### METHYL ETHYL KETONE

Incompatible with: strong oxidants,inorganic acids,ammonia,copper,chloroform.

### N-BUTYL ACETATE

Incompatible with: water, nitrates, strong oxidants, acids, alkalis, zinc.

### 1-METHYL-2-METHOXYETHYL ACETATE

Incompatible with: oxidising substances, strong acids, alkaline metals.

### 10.6. Hazardous decomposition products

In the event of thermal decomposition or fire, gases and vapours that are potentially dangerous to health may be released.

### METHYL METHACRYLATE

When heated to decomposition releases: harsh fumes, zinc alloys.

### **ETHYLBENZENE**

May develop: methane,styrene,hydrogen,ethane.

### **SECTION 11. Toxicological information**

In the absence of experimental data for the product itself, health hazards are evaluated according to the properties of the substances it contains, using the criteria specified in the applicable regulation for classification.

It is therefore necessary to take into account the concentration of the individual hazardous substances indicated in section 3, to evaluate the toxicological effects of exposure to the product.

### 11.1. Information on hazard classes as defined in Regulation (EC) No 1272/2008

Metabolism, toxicokinetics, mechanism of action and other information

### 1-METHYL-2-METHOXYETHYL ACETATE

The main route of entry is the skin, while the respiratory one is less important, given the low vapor pressure of the product.

### Information on likely routes of exposure

### XYLENE (MIXTURE OF ISOMERS)

WORKERS: inhalation: contact with the skin.

POPULATION: ingestion of contaminated food or water; inhalation of ambient air.

### ETHYLBENZENE

WORKERS: inhalation; contact with the skin.

POPULATION: ingestion of contaminated food or water; contact with the skin of products containing the substance.

### 3006912010320 - FS01 YELLOW

Revision nr.2 Dated 21/02/2023 Printed on 21/02/2023 Page n. 14 / 23

Replaced revision:1 (Dated 21/05/2022)

### **SECTION 11. Toxicological information** .../>>

1-METHOXY-2-PROPANOL

WORKERS: inhalation; contact with the skin.

POPULATION: ingestion of contaminated food or water; inhalation of ambient air; contact with the skin of products containing the substance.

N-BUTYL ACETATE

WORKERS: inhalation; contact with the skin.

1-METHYL-2-METHOXYETHYL ACETATE WORKERS: inhalation: contact with the skin.

### Delayed and immediate effects as well as chronic effects from short and long-term exposure

### XYLENE (MIXTURE OF ISOMERS)

Toxic effect on the central nervous system (encephalopathy); irritating for the skin, conjunctiva, cornea and respiratory apparatus.

#### **ETHYLBENZENE**

As the counterparts of benzene, may have an acute effect on the central nervous system, with depression, narcosis, often preceded by dizziness and associated with headache (IspesI). Is irritating for skin, conjunctiva and respiratory tract.

#### 1-METHOXY-2-PROPANOL

The main route of entry is the skin, whereas the respiratory route is less important due to the low vapour pressure of the product. Above 100 ppm causes irritation of the eye, nose and oropharynx mucous membranes. At 1000 ppm, disturbance of equilibrium and severe eye irritation can be noticed. Clinical and biological examinations carried out on exposed volunteers revealed no anomalies. Acetate produces greater skin and eye irritation with direct contact. No chronic effects on humans have been reported.

#### N-BUTYL ACETATE

In humans, the substance's vapours cause irritation of the eyes and nose. In the event of repeated exposure, skin irritation, dermatitis (dryness and cracking of the skin) and keratitis appear.

### 1-METHYL-2-METHOXYETHYL ACETATE

Above 100 ppm there is irritation of the ocular, nasal and oropharyngeal mucous membranes. At 1000 ppm there are balance disturbances and severe eye irritation. Clinical and biological tests performed on the exposed volunteers did not reveal any anomalies. Acetate produces greater skin and eye irritation on direct contact. No chronic effects on humans are reported (INCR, 2010).

### Interactive effects

### XYLENE (MIXTURE OF ISOMERS)

Intake of alcohol interferes with the metabolism of the substance, inhibiting it. Ethanol consumption (0.8 g/kg) before a 4-hour exposure to xylene vapours (145 and 280 ppm) causes a 50% reduction in the excretion of methyl hippuric acid, whereas the concentration of xylenes in the blood increases approx. 1.5-2 times. At the same time there is an increase in the secondary side effects of the ethanol. The metabolism of the xylenes is increased by phenobarbital and 3-methyl-colantrene type enzyme inducers. Aspirin and xylenes mutually inhibit their conjugation with the glycine, which results in a decrease in urinary excretion of methyl hippuric acid. Other industrial products can interfere with the metabolism of xylenes.

### N-BUTYL ACETATE

A case of acute intoxication been reported involving a 33 year old worker while cleaning a tank with a preparation containing xylenes, butyl acetate and ethylene glycol acetate. The person had irritation of the conjunctiva and upper respiratory tract, drowsiness and motor coordination disorders, which disappeared within 5 hours. The symptoms are attributed to poisoning by mixed xylenes and butyl acetate, with a possible synergistic effect responsible for the neurological effects. Cases of vacuolar keratitis are reported in workers exposed to a mixture of butyl acetate and isobutanol vapours, but with uncertainty concerning the responsibility of a particular solvent (INRC, 2011).

### SKIN CORROSION / IRRITATION

Repeated exposure may cause skin dryness or cracking.

METHYL METHACRYLATE Species: Rabbit / Rabbit

Result: non-irritating - slightly irritating

Remarks: in case of prolonged and / or frequent contact with the skin, irritation cannot be excluded

Skin irritation Category 2 (UN-GHS).

### SERIOUS EYE DAMAGE / IRRITATION

Does not meet the classification criteria for this hazard class

METHYL METHACRYLATE Species: Rabbit / Rabbit

Result: non-irritating - slightly irritating.

### **RESPIRATORY OR SKIN SENSITISATION**

Sensitising for the skin

METHYL METHACRYLATE

Species: Mouse

Result: possible skin sensitization

Method: OECD TG 429

Human allergic reactions have been observed with different incidence (symptoms: head pains, eye irritation, skin diseases)

Remarks: Skin sensitization Category 1B (UN-GHS).

### Respiratory sensitization

Information not available

Skin sensitization

### 12.2. Persistence and degradability

TITANIUM DIOXIDE

The substance is inorganic; therefore biodegradability tests are not applicable.

XYLENE (MIXTURE OF ISOMERS)

Solubility in water 100 - 1000 mg/l

Rapidly degradable

TITANIUM DIOXIDE

Solubility in water < 0,001 mg/l

Degradability: information not available

METHYL METHACRYLATE

Degradability: information not available

N-BUTYL METHACRYLATE

Solubility in water 15300 mg/l

Rapidly degradable

ETHYLBENZENE

Solubility in water 1000 - 10000 mg/l

Rapidly degradable

1-METHOXY-2-PROPANOL

Solubility in water 1000 - 10000 mg/l

Rapidly degradable

METHYL ETHYL KETONE

Solubility in water > 10000 mg/l

Rapidly degradable

N-BUTYL ACETATE

Solubility in water 1000 - 10000 mg/l

Rapidly degradable

1-METHYL-2-METHOXYETHYL ACETATE

Solubility in water > 10000 mg/l

FATTY ACIDS, C-18, UNSATURATED TRIMERS COMPOSED WITH 9-OCTADECEN-1-AMINE, (Z) -

NOT rapidly degradable

FATTY ACIDS, TALLOIL, COMPOSED WITH OLEYLAMINE

Rapidly degradable

### 12.3. Bioaccumulative potential

TITANIUM DIOXIDE

It does not accumulate in organisms.

XYLENE (MIXTURE OF ISOMERS)

Partition coefficient: n-octanol/water 3,12 BCF 25,9

@EPY 11.1.2 - SDS 1004.14

### 12.4. Mobility in soil

TITANIUM DIOXIDE

The substance is not mobile in the soil.

XYLENE (MIXTURE OF ISOMERS)

Partition coefficient: soil/water 2,73

N-BUTYL METHACRYLATE

Partition coefficient: soil/water 0,94

N-BUTYL ACETATE

Partition coefficient: soil/water 1,27

### 12.5. Results of PBT and vPvB assessment

TITANIUM DIOXIDE

PBT: No evaluation is required for inorganic substances.

vPvB: No evaluation is required for inorganic substances.

On the basis of available data, the product does not contain any PBT or vPvB in percentage ≥ than 0,1%.

### 12.6. Endocrine disrupting properties

TITANIUM DIOXIDE

No specific adverse effects are known.

Based on the available data, the product does not contain substances listed in the main European lists of potential or suspected endocrine disruptors with environmental effects under evaluation.

### 12.7. Other adverse effects

Information not available

### **SECTION 13. Disposal considerations**

The appropriate management of the waste of the mixture and / or its container must be determined in accordance with the provisions of Directive 2008/98 / EC and subsequent amendments, taking into account Regulation (EU) no. 1357/2014 and of the Decision (EU) no. 955/2014

Waste management methods must be assessed on a case-by-case basis, in relation to the composition of the waste itself.

### 13.1. Waste treatment methods

Reuse if possible.

Waste management is performed without endangering human health and without harming the environment and in particular without creating risks for water, air, soil, fauna or flora.

Do not dispose of waste in sewers or waste channels.

Product residues must be disposed of in accordance with current regulations.

The transport of waste must also be carried out in compliance with the provisions of the regulations on the transport of dangerous goods.

Revision nr.2 Dated 21/02/2023 Printed on 21/02/2023 Page n. 20 / 23

Replaced revision:1 (Dated 21/05/2022)

### CONTAMINATED PACKAGING.

The generation of waste should be avoided or minimized wherever possible.

Incineration and landfilling should only be considered when recycling is not practicable.

Keep the label (s) on the packaging. Deliver to an authorized waste management entity.

Containers and packaging contaminated with substances or preparations must be treated like the product and sent for recovery or disposal in compliance with national regulations on waste management.

### EUROPEAN WASTE CODE.

The waste legislation does not allow the identification of CER codes for waste containing the substance / preparation referred to in this document, as they must be identified in accordance with Annex D to Part IV of Legislative Decree 192/06 based on information not available before using the product.

### DANGER CHARACTERISTICS FOR WASTE.

With reference to Regulation (EU) no. 1357/2014, the hazard characteristics for the intact product are:

HP3

Flammable

### **SECTION 14. Transport information**

ADR / RID: NO IMDG: NO IATA: NO

### 14.6. Special precautions for user

ADR / RID: HIN - Kemler: 30 Limited Quantities: 5 L Tunnel restriction code: (D/E)

Special provision: 163, 367, 650

IMDG: EMS: F-E, <u>S-E</u> Limited Quantities: 5 L IATA: Cargo: Maximum quantity: 220

Cargo: Maximum quantity: 220 L Packaging instructions: 366
Pass.: Maximum quantity: 60 L Packaging instructions: 355

Special provision: A3, A72, A192

### 14.7. Maritime transport in bulk according to IMO instruments

Information not relevant

Revision nr.2 Dated 21/02/2023 Printed on 21/02/2023 Page n. 21 / 23

Replaced revision:1 (Dated 21/05/2022)

### **SECTION 15. Regulatory information**

### 15.1. Safety, health and environmental regulations/legislation specific for the substance or mixture

Seveso Category - Directive 2012/18/EU: P5c

Restrictions relating to the product or contained substances pursuant to Annex XVII to EC Regulation 1907/2006

Product Point

3 - 40

Contained substance

Point 75

Regulation (EU) 2019/1148 - on the marketing and use of explosives precursors

Not applicable

Substances in Candidate List (Art. 59 REACH)

On the basis of available data, the product does not contain any SVHC in percentage ≥ than 0,1%.

Substances subject to authorisation (Annex XIV REACH)

None

Substances subject to exportation reporting pursuant to Regulation (EU) 649/2012:

None

Substances subject to the Rotterdam Convention:

None

Substances subject to the Stockholm Convention:

None

Healthcare controls

Workers exposed to this chemical agent must not undergo health checks, provided that available risk-assessment data prove that the risks related to the workers' health and safety are modest and that the 98/24/EC directive is respected.

### 15.2. Chemical safety assessment

A chemical safety assessment has been performed for the following contained substances

XYLENE (MIXTURE OF ISOMERS)

METHYL METHACRYLATE

N-BUTYL METHACRYLATE

1-METHOXY-2-PROPANOL

METHYL ETHYL KETONE

N-BUTYL ACETATE

1-METHYL-2-METHOXYETHYL ACETATE

FATTY ACIDS, C-18, UNSATURATED TRIMERS COMPOSED WITH 9-OCTADECEN-1-AMINE, (Z) -

This safety data sheet contains one or more Exposure Scenarios in an integrated form. Contents have been included in sections 1.2, 8, 9, 12, 15 and 16 of this safety data sheet.

### **SECTION 16. Other information**

Text of hazard (H) indications mentioned in section 2-3 of the sheet:

Flam. Liq. 2 Flammable liquid, category 2
Flam. Liq. 3 Flammable liquid, category 3
Acute Tox. 4 Acute toxicity, category 4
Asp. Tox. 1 Aspiration hazard, category 1

STOT RE 2 Specific target organ toxicity - repeated exposure, category 2

Eye Dam. 1 Serious eye damage, category 1 Skin Irrit. 2 Skin irritation, category 2

**STOT SE 3** Specific target organ toxicity - single exposure, category 3

Skin Sens. 1A Skin sensitization, category 1A

Aquatic Chronic 2 Hazardous to the aquatic environment, chronic toxicity, category 2

H225 Highly flammable liquid and vapour.
H226 Flammable liquid and vapour.

### SECTION 16. Other information .../>>

H302 Harmful if swallowed.
H312 Harmful in contact with skin.

H332 Harmful if inhaled.

**H304** May be fatal if swallowed and enters airways.

H373 May cause damage to organs through prolonged or repeated exposure.

H318 Causes serious eye damage.

**H315** Causes skin irritation.

H335 May cause respiratory irritation.
 H317 May cause an allergic skin reaction.
 H336 May cause drowsiness or dizziness.
 H411 Toxic to aquatic life with long lasting effects.

**EUH066** Repeated exposure may cause skin dryness or cracking.

### Use descriptor system:

ERC 8d Widespread use of non- reactive processing aid (no inclusion into or onto article, outdoor)

LCS PW Widespread use by professional workers
PC 9a Coatings and paints, thinners, paint removers

PROC 10 Roller application or brushing PROC 11 Non industrial spraying

PROC 19 Manual activities involving hand contact
PROC 5 Mixing or blending in batch processes

PROC 8a Transfer of substance or mixture (charging and discharging) at non- dedicated facilities

#### LEGEND:

- ADR: European Agreement concerning the carriage of Dangerous goods by Road
- ATE: Acute Toxicity Estimate
- CAS: Chemical Abstract Service Number
- CE50: Effective concentration (required to induce a 50% effect)
- CE: Identifier in ESIS (European archive of existing substances)
- CLP: Regulation (EC) 1272/2008
- DNEL: Derived No Effect Level
- EmS: Emergency Schedule
- GHS: Globally Harmonized System of classification and labeling of chemicals
- IATA DGR: International Air Transport Association Dangerous Goods Regulation

#### Note for users:

The information contained in the present sheet are based on our own knowledge on the date of the last version. Users must verify the suitability and thoroughness of provided information according to each specific use of the product.

This document must not be regarded as a guarantee on any specific product property.

The use of this product is not subject to our direct control; therefore, users must, under their own responsibility, comply with the current health and safety laws and regulations. The producer is relieved from any liability arising from improper uses.

Provide appointed staff with adequate training on how to use chemical products.

### CALCULATION METHODS FOR CLASSIFICATION

Chemical and physical hazards: Product classification derives from criteria established by the CLP Regulation, Annex I, Part 2. The data for evaluation of chemical-physical properties are reported in section 9.

Health hazards: Product classification is based on calculation methods as per Annex I of CLP, Part 3, unless determined otherwise in Section 11

Environmental hazards: Product classification is based on calculation methods as per Annex I of CLP, Part 4, unless determined otherwise in Section 12.

This information was obtained from the consolidation of the exposure scenarios available for the relevant substances contained in the mixture using the LCID method (Lead Component IDentification Methodology) proposed by CEFIC (REACH Practical Guide on Safe Use Information for Mixtures under REACH, Final version 6.1 - February 2016). The principle behind this method is that the safe use of a mixture is established by the substances that have contributed to its CLP (Lead Components) classification.

It follows that by adopting the operational conditions and risk management measures identified for the relevant (and) scenarios (or) of the Lead Component (s) the use of the mixture should be considered safe.

Guidance for downstream users to assess whether they are making a safe use of the mixture:

When the operating conditions and risk management measures described are adopted, the use of the mixture is considered safe. If additional risk management measures or operational conditions are used, operators should ensure that risks are limited to an equivalent or higher level.

Changes to previous review:

The following sections were modified:

01/03/04/05/06/08/09/10/11/12/13/15/16.
